

VCI Anti-Tarnish and Corrosion Prevention packaging papers protect specialty metals commonly used in electronics, aerospace, automotive and other precision parts manufacturing. They are designed to prevent tarnish on silver, and stop corrosion on copper and a variety of other metals.

- **Alumitex® (AT35):** A 35lb./57gsm neutral natural Kraft, unprinted - Nitrite-free. Provides contact corrosion protection to ferrous and many non-ferrous metals including aluminum, galvanized steel and lead alloys. Protects water spotting and corrosion when in contact with metal. Use as an interleaver.

- **Coppertex® (CPTX):** 35lb./57 gsm natural Kraft - Nitrite-free. Coppertex prevents staining and protects copper, brass, bronze, and other copper alloys from tarnish and corrosion. Use as a wrap and for interleaving. Also available in 60 lb. sheet (CPTX60) and chips.

- **Silver Saver® (SS) Anti-Tarnish:** a 40 lb. /57gsm bleached Kraft – Nitrile free. Protects silver, gold, and noble metals from tarnish.
